PROJECT

PYTHON PROJECT :

1) Grocery Application
In this Grocery store Management Systems designed to provide the grocery stores with benefit of having everything online, from products data to customers data. It helps the store managers to perform various functions like checking the product stock, suppliers information and also allows them to check particular product is available or not.

DJANGO PROJECT :

1) IT Class Site with Authentication
in this project we add user's data in our database using djangoAuthentication system. the built-in authentication system ensures that only authorized users can access.
also we fetch data from the database and making it available to on webpage.
